Is there a better way to manage my If statements?

My issue is; I have 10 or so dialog boxes and depending on which I have found, I need to use the code associated with the dialog box. I have 2-5 objects that I look for to determine which dialog box that I have.

My problem; is, if the third If statement is not found, my code Exits all of my If statements.
My goal; is to have code to search each of the set of Dialog boxes until it finds the correct "complete" match.

My code:

```
'1 – Dialog Box
If .WebElement("WebTable_AccountNo").Exist(0) Then
        If  .WebEdit("StartDate").Exist(0) Then
                If .WebElement("mm/dd/yyyy_Start").Exist(0) Then
                        If .WebCheckBox("CheckboxSave").Exist(0) Then
                                Call UseReport1
                        End If
                End If
        End If
'2 – Dialog Box
ElseIf .WebElement("WebTable_AccountNo").Exist(0) Then
        If .WebRadioGroup("TradeDtRange").Exist(0) Then
                Call UseReport2
        End If
'3 -- Dialog Box
ElseIf .WebElement("WebTable_AcctType").Exist(0) Then
        If .WebElement("WebTable_CAP").Exist(0) Then
                If .WebElement("StartDate").Exist(0) Then
                        Call UseReport3
                End If
        End If
'4 – Dialog Box
ElseIf .WebElement("WebTable_CAP").Exist(0) Then
        If .WebEdit("SubFirm").Exist Then
                If .WebElement("StartDate").Exist(0) Then
                        Call UseReport4
                End If
        End If
'5 – Dialog Box
ElseIf .WebElement("WebTable_AccountNo").Exist(0) Then
        If .WebElement("StartDate").Exist(0) Then
                If .WebCheckBox("CheckboxSave").Exist(0) Then
                        If .WebList("Select_Month").Exist Then
                                Call UseReport5
                        End If
                End If
        End If
'6 – No Dialog Box
ElseIf ReportName = "ALL IMAGED CLIENT DOCUMENTS" Then
        Call UseReport6
Else
        MsgBox ("No matching Search Preference dialog box found")
End If
```

How can I change my code so that if I reach 1-Dialog Box's third If statement and Fails, the code will check the next 2 –Dialog Box's code. Or must I complete each Dialog box's If..If..If… EndIf…EndIf..EndIf statements, etc?
