

Switching Links

I have a coding question. More so, how to do type of a question?

On the following screenshot, At the top, there are "5 links" under Select a Document (Account Documents | Rep Reports | Branch Reports | Sub Firm Reports | Firm Reports) that are 5 separate pages (each link has a similar output as shown in the below attachment)

Currently, my code can read each of the Document Types for each GroupName's that I set to copy. Then I copy them to an excel sheet. From there I can come back and select all of each GroupName's report links to test.

My issue, is how to best select each of the "5 links" and do the same. Currently, I have each of the GroupName's (48 in all) for each page in my Action1 datasheet. These have been too hard to read and copy to a ss.

So, after finding the report links on the Account Document page, I then need to switch the Rep Reports page. I need to continue to follow my Action 1 ds to see if it is to be copied or not. My issue is how to set this up.

How can call each link, do it's testing, then continue to the next link.?

The screenshot shows a web application interface with a navigation menu at the top. The main content area is titled "Image Access" and includes a "Select a Document" section with links for "Account Documents", "Rep Reports", "Branch Reports", "Sub Firm Reports", and "Firm Reports". Below this is a table of document types and IDs.

| Document Type | Document ID | Actions |
|---|-------------|-------------------------------|
| ANNUAL SUMMARIES AND YEARLY TAX FORMS | YETSBRGREB | [Display] [Search] [Add Fav.] |
| ANNUAL SUMMARIES AND YEARLY TAX FORMS CHL | YETSBRGREB | [Display] [Search] [Add Fav.] |
